Suite 101  
Folsom, CA 95630

# Payroll Workflow Streamlined in the Cloud

## Resulting In Lower Operational Costs

Dedicated to providing the most advanced care to their patients, Florida Medical is constantly working to operate with the most innovative technologies and streamline their workflow to reduce costs. So, they looked to the cloud.

Florida Medical looked for a payroll system solution that would require little to no maintenance on their part with no overhead costs, and work with their long-standing time and attendance application, they turned to Tribridge. Running Microsoft Dynamics GP in the cloud, Tribridge was able to provide a payroll solution that did not require the purchase of additional servers or other hardware.

“Sierra’s bi-directional interface was able to connect to Microsoft Dynamics GP in the cloud with a configuration change to the TimeMaster Integration Application. And it works with Binary Stream’s Multi-Entity Management tool passing it the information it requires to work optimally.”

Florida Medical has been using their time and attendance solution, Sierra Workforce Solution’s TimeMaster Pro, since 2001. They had a couple of concerns. How would they transfer their employee’s time and attendance data – time punches, pay rates, pay codes, and other information like employee information back and forth between the two systems? They also utilize Binary Stream’s Multi-Entity Management tool which allows you to centralize all of your ERP business processes securely in one database – working in the cloud with Microsoft Dynamics GP.

The solution was simple. Fortunately, Florida Medical had already been using Sierra Workforce Solution’s TimeMaster Integration Application in-house for years to transfer their time and attendance, employee, and organizational data.

Florida Medical achieved results, saving them time and money with the ability to process their timecards and port them to payroll in the cloud effortlessly in a matter of minutes. “Sierra’s TimeMaster Integration Application is a gift. It saves our clients anywhere from one hour to 6½ hours depending on the size of the company. With options built in for GP Project Accounting, it’s more than just a time and attendance interface,” states Mike Christiansen, President of Sierra Workforce Solutions.

**The less time accounting staff spends doing double entry, processing errors, and double verifying time data, the less pay runs cost. Another side effect is a happier accounting team that gets to go home on time. Having the three prong solution work together seamlessly, as designed, is a triple-play for Florida Medical!**

*Tribridge is an IT services and business consulting firm serving customers nationwide, specializing in CRM implementations, Accounting and ERP systems, SharePoint, Security and Infrastructure, and custom application development.*

*Binary Stream Software is an award-winning Microsoft Gold Certified solution with the highest integration possible for Microsoft Dynamics GP. With over 1,000 customers, ranging from mid-sized to billion-dollar organizations, their solutions are an integral part of a complete ERP solution.*
