Cloud Services Fact Sheet

Using Sierra's Cloud Service allows you to maintain complete control of your information while we keep your applications running smoothly. In addition, Sierra's Cloud Service option is a safe and effective way to budget your technology infrastructure costs into one simple monthly payment.

When subscribing to our Cloud Services you will have access to a multi-server environment combining multiple physical and virtual machines bridged with gigabit and fiber connectivity. Users access via any HTML5 capable browsers, making the system completely platform independent.

Data Center Security: Our data center is secured at multiple points, including required biometric authentication to access the data center.

Monitoring of Systems: Internal and external monitors are in place with multiple alert protocols; facilities have climate control and massive foam fire suppressive measures in place.

Redundant Network Infrastructure: We have multiple redundant primary data backbones; including multiple electrical grids, multiple data grids, and extensive battery backup. In addition information is also backed up in three different geographic locations.

Our facilities are **SAS 70** certified!
