

Finger Vein Reader

Sierra Workforce Solution's Finger Vein Reader offers the most advanced technology for your company—ensuring maximum security when authenticating your employees. This device safely reads finger vein patterns found underneath the skin that are unique to each individual. The resulting pattern is then matched with an encryption database record to authenticate a person. Since every person has a unique vein pattern, this identification technique is virtually impossible to forge.

Sierra Workforce Solutions has over 25 years of industry excellence providing in-depth business requirements analysis, best practice consultation and guidance, professional implementation and training.

Put the power of automated data collection to use in your business!
